Flood Zone Descriptions

A - Areas of 100-year flood: base flood elevations and flood hazard factors not determined.

AE - Areas subject to inundation by the 100 year flood event determined by detailed methods.

ANI - Area not included in FEMA study

D - Undesignated flood zone. No determination has been made regarding the flood levels.

X - Areas identified in the community FIS as areas of moderate or minimal hazard from the principal source of flood in the area. However, buildings in these zones could be flooded by severe, concentrated rainfall coupled with inadequate local drainage systems. Local storm water drainage systems are not normally considered in the community's FIS. The failure of a local drainage system creates areas of high flood risk within these rate zones.

X500 - Areas subject to inundation by the 500 year flood event determined by detailed methods.

Data Source: FEMA, NJDEP, USGS

Scale 1" : 4 Miles

Comparable data is not available for the New York portion of the watershed management area.

This map was developed using New Jersey Department of Environmental Protection Geographic Information System digital data, but this secondary product has not been verified by NJDEP and is not state-authorized.
